

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-20 (Canceled)

21. (New) A multifunctional tridimensional combined ecological architecture, having one, several or more buildings, comprising:

- an ecological structure for organisms,
- a natural ecological structure,
- a place for human culture activity,
- an organism production system,
- cooperating systems,

wherein said building or buildings have a tridimensional structure, and include an aboveground part, an underground part, or both, wherein a top roof, side(s), or both of said building or buildings are partly or completely transparent, openable and closable, or both;

wherein said natural ecological structure and said ecological structure for organisms are provided anywhere inside or outside of said building or buildings, and include plants, animals, a water resource and human cultural sights therein;

said more buildings comprise one, a part, or all of ecological structures of Taiji graphics type, Eight Gua graphics type, or both, hood type, frame hood type, tree frame type, tridimensional land type, tridimensional warm house type, combined frames type, turret frame type, combined passage type, hacienda type, ecological village type, ecological town type, tridimensional ecological river type, tridimensional ecological bridge type, tridimensional ecological road type and tridimensional ecological wall type;

said organism production system comprises cultivation devices, processing devices, storing and transferring devices and marketing devices;

said cooperating systems comprise at least a part or all of a water recycling system, an electrical system, a ventilation system, a temperature and humidity regulating system, a light

transmitting system, a methane systems, an illumination system and a control system; said one, several or more buildings and the systems comprised by the cooperating systems are combined in a manner of part or complete combination.

22. (New) The multifunctional tridimensional combined ecological architecture according to claim 21, wherein

said water recycling system comprises a precipitation gathering and purifying device, a sewage water recuperating and classification and purifying device, an external water resource input device, a device for filtering and purifying water from air, a sanitation device, a water reservoir device and a water supply device;

said electrical system comprises a power generation and storing device, a power transmission and power supply device, a voltage transformation and power distribution device;

said ventilation system comprises an air input/output device, an oxygen supply device, an air purifying and recycling device and a sanitation device;

said temperature and humidity regulating system comprises a temperature regulating device and a humidity regulating device;

said light transmitting system comprises a light refractive device and a light transmitting device;

said methane system comprises a methane tank and a methane storing and utilization device; said control system comprises automatic, manual, or automatic and manual control mechanisms for the devices, systems, or both; and

wherein said place for human culture activity comprises a place for resting and a place for sports and cultural activities.

23. (New) The multifunctional tridimensional combined ecological architecture according to claim 22, further comprising tridimensional ecological walls provided in part or in periphery of

said building or buildings; wherein the walls are fixed or moveable and have plant and organism cultivation structures thereon.

24. (New) The multifunctional tridimensional combined ecological architecture according to claim 23, wherein the device for filtering and purifying water from air comprises a blower, to introduce air into said devices for filtering and purifying water from air through the air inlet thereof, wherein moisture in the air is vaporized by heaters provided inside said devices for filtering and purifying water from air, and then the moisture is held by the water cooling and filtering and capturing devices, then the water is discharged out of the devices for filtering and purifying water via an outlet of a channel for discharging water, said devices for filtering and purifying water from air are in the form of passage type, upright-type, or caged-type, or suspended-type, or air-conditioning-type.

25. (New) The multifunctional tridimensional combined ecological architecture according to claim 22, wherein said control system is configured to have an intelligent control mechanism that is able to implement complete control, part control, or individual control of devices; and wherein said architecture is also provided with anti theft alarming systems, image transmission mechanisms, and dialogue control system for security in buildings, and closed-circuit monitoring systems.

26. (New) The multifunctional tridimensional combined ecological architecture according to claim 22, wherein said buildings are connected with one another via roads, bridges, or both; the roads or bridges optionally including tridimensional roads and tridimensional bridges provided in stories.

27. (New) The multifunctional tridimensional combined ecological architecture according to claim 22, wherein said cultivation device is movable or stationary, wherein said cultivation device has one, part, or all of an organism cultivation structure, a cultivation frame for organism, an organism cultivation plate, or an organism cultivation box, which are suspended, laid, piled, tridimensional, or shelved, and wherein a temperature regulating mechanism, a water supply mechanism, or both are provided inside said cultivation box.

28. (New) The multifunctional tridimensional combined ecological architecture according to claim 22, wherein the power generation and storing device comprises one or more or all of a solar power generation and storing device, a wind power generation and storing device, a water power generation and storing device, and a mechanical power generation and storing device.

29. (New) The multifunctional tridimensional combined ecological architecture according to claim 28, wherein said solar power generation and storing devices comprise solar cell receiving plates, electric storage devices, transformer devices, current meters, power distributing devices, accessories of electric supplier networks; said solar power generation and storing devices are integrated ones, in which electric suppliers devices are integrated into a network in the buildings or on the grounds for use in the entire architecture, or separated ones, in which they are mounted in part areas or separate apartments of the buildings for separate use; said solar cell receiving plates are of one , a part ,or all of laid-type, upright-type, fixed-type, folded-type, or rotatable type, form of balconies, form of door or windows, form of curtains or form of walls.

30. (New) The multifunctional tridimensional combined ecological architecture according to claim 26, wherein part of the buildings themselves is movable.

31. (New) The multifunctional tridimensional combined ecological architecture according to

claim 22, wherein said light refractive devices are fixed, moveable, or both with lights, and are controllable by lights or manually.

32. (New) The multifunctional tridimensional combined ecological architecture according to claim 21, wherein said buildings are combinable in one, a part, or all of various types of forms, comprising Taiji graphics type, Eight Gua graphics type, or both, hood type, frame hood type, tree frame type, tridimensional land type, tridimensional warm house type, combined frame, turret frame type, combined passage type, hacienda type, ecological village type, ecological town type, tridimensional ecological river type, tridimensional ecological bridge type, tridimensional ecological road type, tridimensional ecological wall type.

33. (New) The multifunctional tridimensional combined ecological architecture according to claim 32, wherein said more buildings, which are combined in tridimensional land type of form, are provided in stories, and comprise aboveground, underground, or both organism cultivation spaces, a natural ecological environment space and a human cultural place, and wherein said more buildings are provided collectively or separately with a water storing system, a water supplying system, a methane utilizing device, a water purifying system, a power generation and supplying device and a lifting device, each of which systems or devices is provided separately or in combination with other systems or devices.

34. (New) The multifunctional tridimensional combined ecological architecture according to claim 32, wherein said more buildings, which are combined in combined passage type of form, are provided aboveground, underground, or both, are combined in single storey or stories, and are provided therein with passages, which passages are provided inside and outside completely or partly with one or more of organism cultivation, transportation and human cultural and natural ecological environment structures, a water draining device, a water storing device and a power

supplying device, each of which devices is provided separately or in combination with other devices.

35. (New) The multifunctional tridimensional combined ecological architecture according to claim 32, wherein said more buildings, which are combined in tridimensional ecological river type of form, comprise collectively or separately exposed river type, hidden river type, awning type, inside, outside, or both inside and outside organism cultivation devices, a water purifying device, a water storing device, a water recycling device, a tridimensional ecological device, each of which devices is provided separately or in combination with other devices.

36. (New) The multifunctional tridimensional combined ecological architecture according to claim 32, wherein said more buildings, which are combined in tridimensional ecological bridge type of form, have a bridge body which is provided in single story or stories and which is provided with inside, outside, or both inside and outside, organism cultivation, natural ecological environment structures or both.

37. (New) The multifunctional tridimensional combined ecological architecture according to claim 32, wherein said buildings, which are combined in tridimensional ecological road type of form, have a road structure of single story or stories aboveground, underground, or both, which road structure is provided thereon in stories or sections with inside, outside, or both inside and outside, organism cultivation environment, human cultural and natural ecological environment structures, or both and is provided with a water draining device, a water storing device and a power supplying device, each device provided separately or in combination with other devices.

38. (New) The multifunctional tridimensional combined ecological architecture according to claim 27, wherein said cultivation frame for organism is a space rotating cultivation frame for

organisms, which has various forms and are provided inside, outside, or both inside and outside the building or buildings, and are provided singly or in combination.

39. (New) The multifunctional tridimensional combined ecological architecture according to claim 32, wherein said buildings, which are combined in tree frame type of form, have various forms, comprise building structures, an aerial warm house, inside and outside organism cultivation structures and a water storing and supplying device, and are provided separately or in combination.

40. (New) The multifunctional tridimensional combined ecological architecture according to claim 29, wherein said solar cell receiving plates and said light transmitting devices are combined by assembling into a fixed or rotatable equipment with multiple functions, which equipment with multiple functions is upright type or desktop type and wherein the equipment can be used in combination with the building or separately.

41. (New) The multifunctional tridimensional combined ecological architecture according to claim 32, wherein said building or buildings have stories and said more buildings are combined into a tridimensional ecological village, a tridimensional ecological town, or both.

42. (New) The multifunctional tridimensional combined ecological architecture according to claim 21, wherein said ecological structure for organisms and said natural ecological structure comprise one or more or all of an ecological structure of tridimensional land type, an ecological structure of ecological river type, an ecological structure of ecological wall type, ecological structures of Taiji graphics type, Eight Gua graphics type, an ecological structure of passage type, an ecological structure of tree frame type, an ecological tridimensional warm house structure, an ecological structure of ecological bridge type and an ecological structure of ecological road type.

43. (New) The multifunctional tridimensional combined ecological architecture according to claim 21, wherein said place for human culture activity comprises one or more or all of a residential house, and places for offices, commerce, sports, culture, factories, schools, researches, storages, sanatorium, and stations.

44. (New) The multifunctional tridimensional combined ecological architecture according to claim 32, wherein said organism production system comprises an underground ecological structure having a roof, a part or the entirety of which is transparent, openable and closable, or both; the underground ecological structure comprising a storey or stories of ecological structures and being provided therein with sun light refractive device, light transmission device, or both.

45. (New) The multifunctional tridimensional combined ecological architecture according to claim 44, wherein said underground ecological structure comprises a structure for cultivation of plants, a structure for cultivation of animals, or both.

46. (New) The multifunctional tridimensional combined ecological architecture according to claim 32, further comprising a tridimensional land ecological device comprising a story or stories of tridimensional land and a layer of soil on original ground; wherein plants, animals, or both are cultivated on the story or stories of tridimensional lands; said tridimensional land ecological device is provided further therein with an agriculture machine.
